

Key Facts Sheet

nbn® Fixed Line

Important information about the nbn® network speed options available with Moose Mobile.

Speeds How fast?					
Available plans					
	12/1 ¹	25/10 ¹	50/20 ¹	100/20 ¹	500/50 ^{1,3}
Typical evening speed	11 Mbps ²	25 Mbps ²	50 Mbps ²	100 Mbps ²	TBA ⁴
¹ This indicates the maximum possible speed (Mbps) you can receive off-peak (11pm–7pm). ² This is the typical download speed you can expect during busy periods (7pm–11pm). ³ Not available at all premises – only available on infrastructure capable of supporting superfast speeds. Your router may limit the maximum speed you can achieve on WiFi. ⁴ These are new plans and we do not yet have information available on the typical evening speed for these plans. When this data is available, we will update our website and CIS to include this information. If your line cannot provide the speed tier of your plan and this cannot be fixed, you can move to a lower speed plan or exit your plan at no cost.					
Pricing How much?					
Plan price	\$59.80/month	\$65.80/month	\$79.80/month	\$84.80/month	\$84.80/month
Availability Which nbn® technologies?

Notes					
Technical Limitations <ul style="list-style-type: none"> Your nbn® service will not work during power failures. This service does not include a battery backup power supply for nbn® supplied equipment or customer equipment. During a power outage your VoIP phone will not function, including calls to emergency services. Your speed or performance may be reduced by a range of other factors such as your router, internal house wiring and wifi interference. Talk to us about what may be causing your slow speeds and we can suggest ways to improve the speed or performance. 					
Medical Alarms / Security <p>Before acquiring an nbn® service, you should find out if any medical or security alarm services you want to use are compatible with an nbn® service. If any such services are not compatible, you should check with the provider to see what alternatives are available.</p>
